

SCIENTIFIC

PROGRAM

and

ABSTRACTS

CODATA'94 has been organized

Under the patronage of the Ministère de l'Environnement, the Ministère de l'Enseignement Supérieur et de la Recherche, the Ministère de l'Industrie and the Ministère de la Défense.

Under the sponsorship of the Académie des Sciences for the 1994 Lavoisier Celebration Year, the International Council of Scientific Unions, Unesco, the Comité Européen de Recherches et d'Etudes en Thermodynamique, the University of Savoy and the assistance of several organizations (ADEME, SML, IRPL, SFBA, LNE, EUREKA, AFNOR, ...).

With support from the Conseil Régional de la Région Rhône-Alpes, from the Conseil Départemental de la Savoie and from the City of Chambéry.

14th International CODATA Conference
18-22 September 1994

Chambéry, Savoy, France

S C I E N T I F I C PROGRAM and ABSTRACTS

14th International CODATA Conference

18-22 September 1994

Chambery, Savoy, France

DATABASES IN THERMODYNAMICS OF COMPLEXATION

Vitaliy P. Solov'ev

Institute of Physiologically Active Substances

Russian Academy of Sciences

Chernogolovka, Moscow Region 142432, Russia

The original factual database on an IBM PC in the thermodynamics of complexation of macrocyclic polyethers with salts of alkali and alkaline-earth metals has been created. The database contains more than 4000 records. These records include the critically reviewed and evaluated thermodynamic data derived from over 60 journals covered by Chemical Abstracts (CA) from 1968 to the present. The reaction record contains the structure diagram for ligand (macrocyclic polyether, crown-ether), formula of salt of alkali or alkaline - earth metal, the solvent, concentrations of ligand and salt in solution, ionic strength, temperature, equilibrium constant 1 gK , the enthalpy ΔH , the entropy ΔS , where available, experimental methods for evaluation of thermodynamic data, references, all of which are searchable and displayable. The database is in English, except for some text fields. At present, we are preparing the factual database in thermodynamics of the complexation of all organic ligands with metal cations. This database will contain more than 50 000 reactions.
